4.2 Capacity - community

This sheet collects expected capacity for community services. You should input the expected available capacity across the different service types.

You should include expected available capacity across these service types for eligible referrals from community sources. This should cover all service intermediate care services to support recovery, including Urgent Community Response and VCS support. The template is split into 5 types of service:

- Voluntary or Community Sector (VCS) services

- Urgent Community Response

- Reablement or rehabilitation in a person's own home

- Bed-based intermediate care (step up)

Please consider the below factors in determining the capacity calculation. Typically this will be (Caseload*days in month*max occupancy percentage)/average duration of service or length of stay

Caseload (No. of people who can be looked after at any given time)

Average stay (days) - The average length of time that a service is provided to people, or average length of stay in a bedded facility

Please consider using median or mode for LoS where there are significant outliers

Peak Occupancy (percentage) - What was the highest levels of occupany expressed as a percentage? This will usually apply to residential units, rather than care in a person's own home. For services in a person's own home then this would need to take into account how many people, on average, that can be provided with services.

Any assumptions made:	Figures based upon activity flowing through identified services, due to nature of contract full capacity					
	unsure, so assumes performing at capacity.
